

# Transform data with dplyr

# Your turn #0: Load data

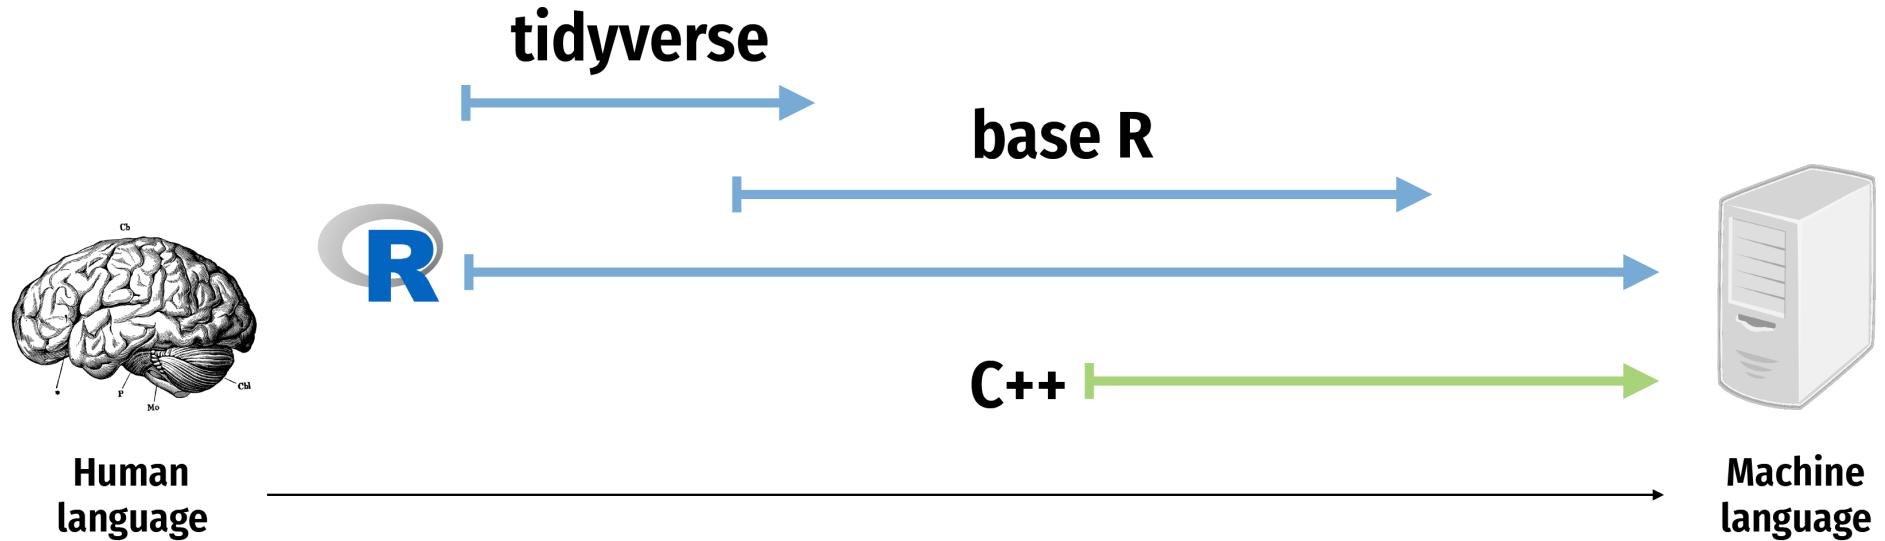

1. Run the setup chunk
2. Take a look at the gapminder data

02 : 00

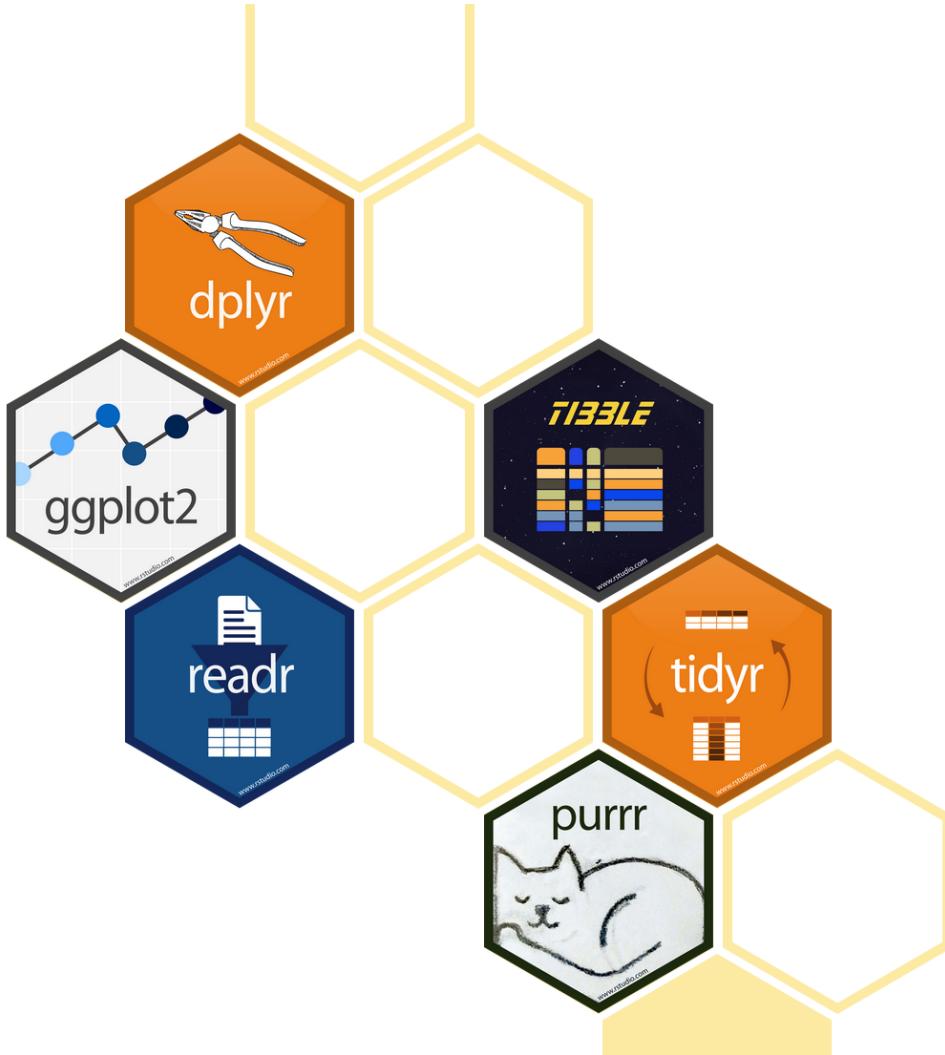

## gapminder

```
## # A tibble: 1,704 x 6
##   country   continent year lifeExp      pop gdpPercap
##   <fct>     <fct>    <int>   <dbl>    <int>     <dbl>
## 1 Afghanistan Asia     1952     28.8  8425333    779.
## 2 Afghanistan Asia     1957     30.3  9240934    821.
## 3 Afghanistan Asia     1962     32.0 10267083    853.
## 4 Afghanistan Asia     1967     34.0 11537966    836.
## 5 Afghanistan Asia     1972     36.1 13079460    740.
## 6 Afghanistan Asia     1977     38.4 14880372    786.
## 7 Afghanistan Asia     1982     39.9 12881816    978.
## 8 Afghanistan Asia     1987     40.8 13867957    852.
## 9 Afghanistan Asia     1992     41.7 16317921    649.
## 10 Afghanistan Asia    1997     41.8 22227415    635.
## # ... with 1,694 more rows
```

# The tidyverse

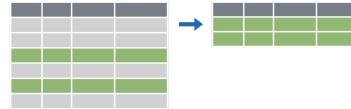

# The tidyverse

# dplyr: verbs for manipulating data

---

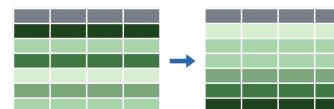

Extract rows with `filter()`

Extract columns with `select()`

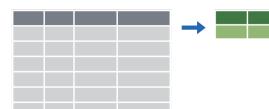

Arrange/sort rows with `arrange()`

Make new columns with `mutate()`

Make group summaries with  
`group_by() %>% summarize()`

# filter()

# filter()

Extract rows that meet some sort of test

```
filter(.data = DATA, ...)
```

- **DATA** = Data frame to transform
- **...** = One or more tests  
filter() returns each row for which the test is TRUE

```
filter(.data = gapminder, country == "Denmark")
```

country	continent	year
Afghanistan	Asia	1952
Afghanistan	Asia	1957
Afghanistan	Asia	1962
Afghanistan	Asia	1967
Afghanistan	Asia	1972
...	...	...

country	continent	year
Denmark	Europe	1952
Denmark	Europe	1957
Denmark	Europe	1962
Denmark	Europe	1967
Denmark	Europe	1972
Denmark	Europe	1977

# filter()

```
filter(.data = gapminder,  
       country ==  
     "Denmark")
```

One = sets an argument

Two == tests if equal  
returns TRUE or FALSE)

# Logical tests

Test	Meaning	Test	Meaning
<code>x &lt; y</code>	Less than	<code>x %in% y</code>	In (group membership)
<code>x &gt; y</code>	Greater than	<code>is.na(x)</code>	Is missing
<code>==</code>	Equal to	<code>!is.na(x)</code>	Is not missing
<code>x &lt;= y</code>	Less than or equal to		
<code>x &gt;= y</code>	Greater than or equal to		
<code>x != y</code>	Not equal to		

# Your turn #1: Filtering

Use `filter()` and logical tests to show...

1. The data for Canada
2. All data for countries in Oceania
3. Rows where the life expectancy is greater than 82

04 : 00

```
filter(gapminder, country == "Canada")
```

```
filter(gapminder, continent == "Oceania")
```

```
filter(gapminder, lifeExp > 82)
```

# Common mistakes

## Using = instead of ==

```
filter(gapminder,  
       country = "Canada")
```

```
filter(gapminder,  
       country == "Canada")
```

## Quote use

```
filter(gapminder,  
       country == Canada)
```

```
filter(gapminder,  
       country == "Canada")
```

# filter() with multiple conditions

Extract rows that meet *every* test

```
filter(gapminder, country == "Denmark", year > 2000)
```

```
filter(gapminder, country == "Denmark", year > 2000)
```

country	continent	year
Afghanistan	Asia	1952
Afghanistan	Asia	1957
Afghanistan	Asia	1962
Afghanistan	Asia	1967
Afghanistan	Asia	1972
...	...	...

country	continent	year
Denmark	Europe	2002
Denmark	Europe	2007

# Boolean operators

---

## Operator Meaning

a & b	and
a   b	or
!a	not

---

# Default is "and"

These do the same thing:

```
filter(gapminder, country == "Denmark", year > 2000)
```

```
filter(gapminder, country == "Denmark" & year > 2000)
```

# Your turn #2: Filtering

Use `filter()` and Boolean logical tests to show...

1. Canada before 1970
2. Countries where life expectancy in 2007 is below 50
3. Countries where life expectancy in 2007 is below 50 and are not in Africa

04 : 00

```
filter(gapminder, country == "Canada", year < 1970)
```

```
filter(gapminder, year == 2007, lifeExp < 50)
```

```
filter(gapminder, year == 2007, lifeExp < 50,  
      continent != "Africa")
```

# Common mistakes

## Collapsing multiple tests into one

```
filter(gapminder, 1960 < year < 1980)
```

```
filter(gapminder,  
       year > 1960, year < 1980)
```

## Using multiple tests instead of %in%

```
filter(gapminder,  
       country == "Mexico",  
       country == "Canada",  
       country == "United States")
```

```
filter(gapminder,  
       country %in% c("Mexico", "Canada",  
                      "United States"))
```

# Common syntax

Every dplyr verb function follows the same pattern

First argument is a data frame; returns a data frame

VERB(DATA, ...)

- VERB = dplyr function/verb
- DATA = Data frame to transform
- ... = Stuff the verb does

# mutate()

## Create new columns

```
mutate(.data, ...)
```

- **.DATA** = Data frame to transform
- **...** = Columns to make

```
mutate(gapminder, gdp = gdpPercap * pop)
```

country	year	gdpPercap	pop
Afghanistan	1952	779.4453145	8425333
Afghanistan	1957	820.8530296	9240934
Afghanistan	1962	853.10071	10267083
Afghanistan	1967	836.1971382	11537966
Afghanistan	1972	739.9811058	13079460
...	...	...	...

country	year	...	gdp
Afghanistan	1952	...	6567086330
Afghanistan	1957	...	7585448670
Afghanistan	1962	...	8758855797
Afghanistan	1967	...	9648014150
Afghanistan	1972	...	9678553274
Afghanistan	1977	...	11697659231

```
mutate(gapminder, gdp = gdpPercap * pop,
       pop_mil = round(pop / 1000000))
```

country	year	gdpPercap	pop
Afghanistan	1952	779.4453145	8425333
Afghanistan	1957	820.8530296	9240934
Afghanistan	1962	853.10071	10267083
Afghanistan	1967	836.1971382	11537966
Afghanistan	1972	739.9811058	13079460
...	...	...	...

country	year	...	gdp	pop_mil
Afghanistan	1952	...	6567086330	8
Afghanistan	1957	...	7585448670	9
Afghanistan	1962	...	8758855797	10
Afghanistan	1967	...	9648014150	12
Afghanistan	1972	...	9678553274	13
Afghanistan	1977	...	11697659231	15

# ifelse()

Do conditional tests within `mutate()`

```
ifelse(TEST,  
       VALUE_IF_TRUE,  
       VALUE_IF_FALSE)
```

- **TEST** = A logical test
- **VALUE\_IF\_TRUE** = What happens if test is true
- **VALUE\_IF\_FALSE** = What happens if test is false

```
mutate(gapminder,  
       after_1960 = ifelse(year > 1960, TRUE, FALSE))
```

```
mutate(gapminder,  
       after_1960 = ifelse(year > 1960,  
                            "After 1960",  
                            "Before 1960"))
```

# Your turn #3: Mutating

Use `mutate()` to...

1. Add an `africa` column that is TRUE if the country is on the African continent
2. Add a column for logged GDP per capita (hint: use `log()`)
3. Add an `africa_asia` column that says “Africa or Asia” if the country is in Africa or Asia, and “Not Africa or Asia” if it’s not

05 : 00

```
mutate(gapminder, africa = ifelse(continent == "Africa",  
                                  TRUE, FALSE))
```

```
mutate(gapminder, log_gdpPercap = log(gdpPercap))
```

```
mutate(gapminder,  
       africa_asia =  
         ifelse(continent %in% c("Africa", "Asia"),  
                "Africa or Asia",  
                "Not Africa or Asia"))
```

# What if you have multiple verbs?

Make a dataset for just 2002 *and* calculate logged GDP per capita

## Solution 1: Intermediate variables

```
gapminder_2002 <- filter(gapminder, year == 2002)
```

```
gapminder_2002_log <- mutate(gapminder_2002,  
                           log_gdpPercap = log(gdpPercap))
```

# What if you have multiple verbs?

Make a dataset for just 2002 *and* calculate logged GDP per capita

## Solution 2: Nested functions

```
filter(mutate(gapminder_2002,  
              log_gdpPercap = log(gdpPercap)),  
       year == 2002)
```

# What if you have multiple verbs?

Make a dataset for just 2002 *and* calculate logged GDP per capita

## Solution 3: Pipes!

The `%>%` operator (pipe) takes an object on the left  
and passes it as the first argument of the function on the right

```
gapminder %>% filter(, country == "Canada")
```

# What if you have multiple verbs?

These do the same thing!

```
filter(gapminder, country == "Canada")
```

```
gapminder %>% filter(country == "Canada")
```

# What if you have multiple verbs?

Make a dataset for just 2002 *and* calculate logged GDP per capita

## Solution 3: Pipes!

```
gapminder %>%
  filter(year == 2002) %>%
  mutate(log_gdpPercap = log(gdpPercap))
```

%>%

```
leave_house(get_dressed(get_out_of_bed(wake_up(me, time =  
"8:00"), side = "correct"), pants = TRUE, shirt = TRUE), car  
= TRUE, bike = FALSE)
```

```
me %>%  
  wake_up(time = "8:00") %>%  
  get_out_of_bed(side = "correct") %>%  
  get_dressed(pants = TRUE, shirt = TRUE) %>%  
  leave_house(car = TRUE, bike = FALSE)
```

# summarize()

Compute a table of summaries

```
gapminder %>% summarize(mean_life = mean(lifeExp))
```

country	continent	year	lifeExp	mean_life
Afghanistan	Asia	1952	28.801	59.47444
Afghanistan	Asia	1957	30.332	
Afghanistan	Asia	1962	31.997	
Afghanistan	Asia	1967	34.02	
...	...	...	...	

# summarize()

```
gapminder %>% summarize(mean_life = mean(lifeExp),  
                           min_life = min(lifeExp))
```

country	continent	year	lifeExp
Afghanistan	Asia	1952	28.801
Afghanistan	Asia	1957	30.332
Afghanistan	Asia	1962	31.997
Afghanistan	Asia	1967	34.02
Afghanistan	Asia	1972	36.088
...	...	...	...

mean_life	min_life
59.47444	23.599

# Your turn #4: Summarizing

**Use `summarize()` to calculate...**

1. The first (minimum) year in the dataset
2. The last (maximum) year in the dataset
3. The number of rows in the dataset (use the cheatsheet)
4. The number of distinct countries in the dataset (use the cheatsheet)

04 : 00

```
gapminder %>%
  summarize(first = min(year),
            last = max(year),
            num_rows = n(),
            num_unique = n_distinct(country))
```

<b>first</b>	<b>last</b>	<b>num_rows</b>	<b>num_unique</b>
1952	2007	1704	142

# Your turn #5: Summarizing

Use `filter()` and `summarize()` to calculate  
(1) the number of unique countries and  
(2) the median life expectancy on the  
African continent in 2007

04 : 00

```
gapminder %>%
  filter(continent == "Africa", year == 2007) %>%
  summarise(n_countries = n_distinct(country),
            med_le = median(lifeExp))
```

<b>n_countries</b>	<b>med_le</b>
52	52.9265

# group\_by()

Put rows into groups based on values in a column

```
gapminder %>% group_by(continent)
```

Nothing happens by itself!

Powerful when combined with summarize()

```
gapminder %>%
  group_by(continent) %>%
  summarize(n_countries = n_distinct(country))
```

<b>continent</b>	<b>n_countries</b>
Africa	52
Americas	25
Asia	33
Europe	30
Oceania	2

```
pollution %>%
```

```
  summarize(mean = mean(amount), sum = sum(amount), n = n())
```

city	particle_size	amount
New York	Large	23
New York	Small	14
London	Large	22
London	Small	16
Beijing	Large	121
Beijing	Small	56

mean	sum	n
42	252	6

```
pollution %>%
```

```
group_by(city) %>%
```

```
summarize(mean = mean(amount), sum = sum(amount), n = n())
```

city	particle_size	amount
New York	Large	23
New York	Small	14
London	Large	22
London	Small	16
Beijing	Large	121
Beijing	Small	56

city	mean	sum	n
Beijing	88.5	177	2
London	19.0	38	2
New York	18.5	37	2

```
pollution %>%
  group_by(particle_size) %>%
  summarize(mean = mean(amount), sum = sum(amount), n = n())
```

city	particle_size	amount
New York	Large	23
New York	Small	14
London	Large	22
London	Small	16
Beijing	Large	121
Beijing	Small	56

particle_size	mean	sum	n
Large	55.33333	166	3
Small	28.66667	86	3

# Your turn #6: Grouping and summarizing

**Find the minimum, maximum, and median life expectancy for each continent**

**Find the minimum, maximum, and median life expectancy for each continent in 2007 only**

05 : 00

```
gapminder %>%
  group_by(continent) %>%
  summarize(min_le = min(lifeExp),
            max_le = max(lifeExp),
            med_le = median(lifeExp))
```

```
gapminder %>%
  filter(year == 2007) %>%
  group_by(continent) %>%
  summarize(min_le = min(lifeExp),
            max_le = max(lifeExp),
            med_le = median(lifeExp))
```

# dplyr: verbs for manipulating data

---

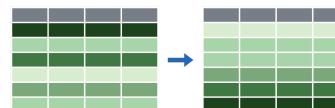

Extract rows with `filter()`

Extract columns with `select()`

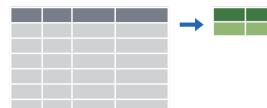

Arrange/sort rows with `arrange()`

Make new columns with `mutate()`

Make group summaries with  
`group_by() %>% summarize()`
